ONE WORLD - INFINITE SOLUTIONS

www.pinnacleholding.co.za

THE STORY OF PINNACLE

2013

Pinnacle Welding was established in 2013 as a wholesale supplier to the welding industry.

2014

Shortly thereafter, the company expanded its offerings to include its own branded welding and cutting machines, welding consumables, and accessories, marking significant growth.

2017

Pinnacle Welding acquired CHISA Welding, initiating its manufacturing operations with the production of CHISA branded welding electrodes and the well recognized Pinnacle Super 7 E6013 and other OEM welding electrodes.

2018

Pinnacle brand had evolved into Pinnacle Welding & Safety, reflecting an expanded product range to meet increasing customer demand for personal protective equipment (PPE). Today, the company offers over 1000 PPE and safety products, including locally manufactured workwear that contribute to the local economy and employment.

2023

In 2023, Pinnacle further broadened its portfolio to power generator and solar products, responding to growing needs for reliable domestic and industrial power solutions. The company now supplies a comprehensive range of Industrial diesel generators powered by SDEC, FAW, Cummins, Perkins engines and equipped with DSE controllers, available in various sizes

2026

Pinnacle to showcase a new Power Tool division to South Africa. kicking off this exciting chapter with a robust range of DIY-grade power tools, combining accessible, cutting-edge technology with the rugged durability needed to empower ambitious home improvers and hobbyists.

Pinnacle's product brands—PINNACLE, CHISA, JASIC, and RILAND—are known for superior quality and value, with most products conforming to SABS, ISO9001, CE, and EN standards. Their products serve diverse sectors including engineering, mining, shipbuilding, agriculture, automotive, construction, petrochemical, DIY retail, and food industries.

THE WAR ON WEAR

PREMIUM WORKWEAR

Unparalleled Protection. Unmatched Durability.

RITHATEX

The job site isn't just a workplace—it's a battlefield. Between abrasive surfaces, unpredictable weather, and the sheer physical grind, your gear is either your greatest asset or your weakest link. A heavy-duty 235gsm 65/35 Polycotton blend, it's dense enough to take a beating from concrete and steel, but breathable enough to keep you moving when the heat is on. Reinforced with YKK Zips—the gold standard in workwear reliability.

- 235gsm 65/35 Polycotton Fabric
- Triple Stitch on inner legs for Extra Strength
- LG Finish for water repellence
- Jacket Size S - 5XL | Trousers Size 28 - 54

ACID RESISTANT WORKWEAR

Superior Protection Against Corrosive Environments.

Maintain absolute safety in high-risk zones with our Acid Resistant Workwear. Specifically engineered for chemical processing, laboratories, and industrial cleaning, this range provides a critical barrier between the wearer and hazardous substances. Treated with specialized finishes that repel liquid chemicals, these garments ensure that spills bead off the fabric rather than soaking through to the skin.

CANADIAN RAIN JACKET

Maximum Defense Against the Elements.

Engineered for the most demanding climates, the Pinnacle Canadian Rain Jacket is a professional-grade outer shell built for endurance. Unlike standard lightweight rainwear, this jacket utilizes a high-denier, PU-coated Oxford fabric designed to resist tearing, abrasion, and heavy downpours. It is the definitive choice for forestry, construction, and open-site logistics where "staying dry" is critical to maintaining shift productivity.

- 300D Oxford With PU Coating Fabric, Water Resistant
- Heat welded waterproof seams
- Plastic front zipper & Adjustable hood cord.
- 50mm Reflective Tape

UNDERSTANDING EN STANDARDS: THE GOLD STANDARD FOR SAFETY WEAR

EN ISO 20471

The international standard for high-visibility (Hi-Vis) clothing. It is designed to ensure that workers are visible in any lighting condition, whether in daylight or under vehicle headlights at night.

EN 342 (Cold Environments):

For temperatures below -5°C (e.g., cold storage or sub-zero outdoor work). This is a more rigorous standard that measures total thermal insulation (I cler) on a moving manikin to account for wind and body movement.

Type 4 (EN 14605):

Type 4 garments are designed to protect the wearer against saturated liquid chemical sprays. Unlike Type 6 (which is for light splashes).

Type 5 (EN ISO 13982-1):

Protection against hazardous dry particles (dust/fibers).

Type 6 (EN 13034):

Protection against limited liquid splashes or sprays (the most common "entry-level" disposable).

UNDERSTANDING EN ISO 20345: THE GOLD STANDARD FOR SAFETY FOOTWEAR

When it comes to workplace safety, the EN ISO 20345 certification is the most critical benchmark in the world. But what does it actually mean for the person wearing the boots?

What is EN ISO 20345?

Simply put, EN ISO 20345 is the international standard that specifies the **minimum requirements** for safety footwear. Any boot bearing this code has undergone rigorous laboratory testing to ensure it protects the wearer against mechanical risks, slips, and thermal hazards.

EN ISO 20345

The "heart" of this standard is the **safety toe cap**. To qualify, the footwear must protect the toes against:

- **Impact:** A force of 200 Joules (equivalent to a 20kg weight dropped from a height of 1 meter).
- **Compression:** A load of 15,000 Newtons (roughly 1.5 tonnes resting on the toe area).

Why is this Standard Important?

Choosing footwear that meets EN ISO 20345 isn't just about ticking a box—it's about three core pillars:

- **Life-Changing Protection:** In industrial, construction, and mining environments, foot injuries can be permanent. This standard ensures that the "basic" level of protection is high enough to prevent crushing and piercing injuries.
- **Legal Compliance & Liability:** For employers, providing EN ISO 20345-certified gear is often a legal requirement. It ensures the workplace meets Health and Safety standards, reducing the risk of costly injury claims and insurance complications.
- **Durability and Quality Assurance:** The standard doesn't just test the toe cap; it tests the tear strength, thickness, and breathability of the leather/upper, as well as the abrasion resistance of the sole. This means a certified boot is built to last in harsh conditions.

NRCS APPROVED: THE SOUTH AFRICAN SAFETY MANDATE

In South Africa, the **National Regulator for Compulsory Specifications (NRCS)** is the government body responsible for protecting human health and safety. While ISO standards are international, the NRCS ensures that any safety footwear entering the South African workforce actually meets those standards

1. What does "NRCS Approved" mean?

Every model of safety footwear sold in South Africa must be homologated (officially approved) by the NRCS under the compulsory specification VC 9002. This process involves:

- **Independent Testing:** The footwear is tested in accredited laboratories to confirm it meets the **SANS 20345** (South African National Standard).
- **Letter of Authority (LOA):** Once the NRCS is satisfied that the boot meets all safety, durability, and material requirements, they issue a Letter of Authority (LOA) to the manufacturer or importer.
- **Unique Approval Number:** Every approved boot is assigned a unique number that must be permanently marked on the product.

2. Why is NRCS Approval Important?

For an employer or safety officer, buying NRCS-approved footwear is about Risk Management:

- **Legal Compliance:** The Occupational Health and Safety (OHS) Act requires employers to provide PPE that meets national standards. Using non-approved footwear is a violation of South African law.
- **Insurance Protection:** In the event of a workplace injury, insurance providers may reject a claim if it is found that the employee was wearing non-homologated (unapproved) footwear.
- **Verified Protection:** The NRCS ensures the "200 Joule" claim on the box is a reality, not just a marketing promise. It protects workers from substandard "counterfeit" safety gear.

3. How to Identify NRCS Approved Footwear

Your customers should look for the NRCS approval number, which is typically found on the **tongue label** of the boot.

- It follows a specific format: NRCS/9002/XXXXXX/XXXX

VIP TIG GLOVES (PIG SKIN)

Item Code: 13-100113
 Size: Wrist Length

Material: Premium Pig Skin Leather.
 Color: Cream
 Palm: Standard Smooth Palm.
 Stitching: Standard
 Lining: None

The VIP TIG Pig Skin Glove is a premium piece of hand protection specifically engineered for the high-precision demands of TIG welding and other tasks requiring exceptional dexterity.

Cream

VIP TIG GLOVE GLOVES (GOAT SKIN)

Item Code: 13-100114 | 13-100115
 Size: +8" (20cm) Extended Cuff | Wrist Length

Material: Premium Goat Skin
 Color: Chrome (Grey)
 Palm: Standard Smooth Palm
 Stitching: Standard
 Lining: None

The VIP Goat Skin TIG Gloves are a specialized glove meticulously engineered for TIG welding, where a high degree of dexterity is essential alongside robust heat protection.

YELLOW LEATHER NAPA TIG GLOVES

Item Code: 13-1001151
 Size: Wrist Length

Material: Premium Yellow Cow leather.
 Color: Yellow.
 Palm: Standard palm.
 Stitching: Standard
 Lining: None

Crafted from premium Cowhide Leather treated with a NAPA finish, which yields an exceptionally soft, supple texture that maximizes the welder's tactile sensitivity and flexibility, allowing for precise control of the torch and filler wire.

VIP TIG GLOVES (CHROME COW LEATHER)

Item Code: 13-1001131
 Size: Wrist Length

Material: Premium cow leather.
 Color: Chrome (Grey)
 Palm: Standard Palm
 Stitching: Standard
 Lining: None

The VIP TIG Glove is a premium piece of hand protection specifically engineered for the high-precision demands of TIG welding and other tasks requiring exceptional dexterity.

VIP TUMI BROWN LEATHER TIG GLOVES

Item Code: 13-1001132

UNDERSTANDING EN STANDARD: THE GOLD STANDARD FOR HAND PROTECTION

Hand protection standards in Europe are comprehensive, focusing on specific hazard types. Because you are a manufacturer and wholesaler, you should look for the EN ISO 21420 (formerly EN 420) as the mandatory "base" standard for all gloves, covering general requirements like fit, comfort, and safety of materials.

Beyond that, you need to match the specific hazard to the correct EN standard.

1. Mechanical Risks (EN 388)

This is the most common standard for general work and welding gloves. Ratings are marked under a hammer icon with four digits and two optional letters.

The Tests: Abrasion (1–4), Cut (Coup test 1–5), Tear (1–4), and Puncture (1–4).

The Cut (TDM) Rating: A second cut test (ISO 13997) is performed if the material dulls the blade in the Coup test; it is rated A–F (F being the highest).

Impact Protection: If the glove is rated for impact, a "P" appears at the end.

2. Thermal Risks (EN 407)

Used for gloves protecting against heat and fire (but not for dedicated firefighting or standard welding, which has its own specific requirements).

The Tests: Limited flame spread, contact heat, convective heat, radiant heat, small molten metal splashes, and large molten metal quantities.

Ratings: Each of these six tests is graded 1–4. If a glove fails or is not tested for a specific hazard, it is marked with an "X".

3. Chemical & Microorganism Risks (EN ISO 374)

This standard defines how gloves must perform when handling hazardous liquids or pathogens.

Classification:

Type A: ≥ 30 mins permeation resistance for ≥ 6 chemicals.

Type B: ≥ 30 mins permeation resistance for ≥ 3 chemicals.

Type C: ≥ 10 mins permeation resistance for ≥ 1 chemical.

Bio-hazards: The "Virus" marking under the shield icon is critical for protection against viruses, bacteria, and fungi.

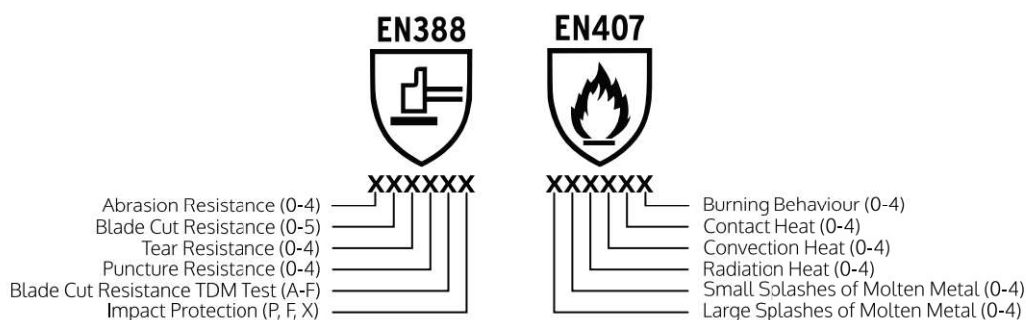

4. Welding-Specific Gloves (EN 12477)

Since you manufacture welding equipment, this is the most critical standard for your glove line. To be certified as EN 12477, the glove must pass a combination of EN 388 (mechanical) and EN 407 (thermal).

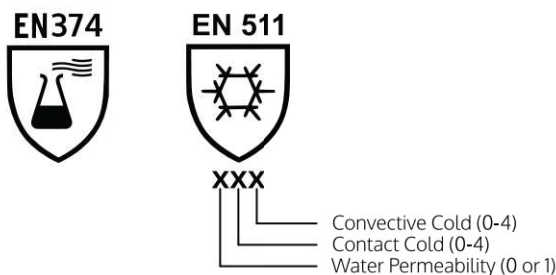

Type A: Offers higher heat protection but lower dexterity (best for MIG/MMA welding).

Type B: Offers lower heat protection but higher dexterity (best for TIG welding).

Quick Reference

| CHEMICAL | CAS # | CLASS |
|--------------------------|-----------|-------------------------------------|
| A Methanol | 67-56-1 | Primary alcohol |
| B Acetone | 67-64-1 | Ketone |

HEADBAND EARMUFFS

High-Decibel Suppression for High-Performance Environments.

Overview: In industrial environments where noise levels are a constant variable, hearing protection is non-negotiable. The Pinnacle eXtreme earmuffs are engineered to provide superior acoustic insulation without the physical fatigue associated with heavy, traditional hearing protection. Designed with a low-pressure headband and multi-position adjustment, these earmuffs ensure a consistent, airtight seal for all-day protection in noise-heavy zones.

RED EARMUFFS

Item Code: 13-100135
 Description: Econo Earmuffs

Material: ABS Shell & PVC Covered Cushions
 Weight: 280g
 Color: Red
 SNR: 27db

EN352-1

The Red Earmuffs are lightweight and robust hearing protectors designed for general application in environments with moderate noise levels. These earmuffs provide reliable protection with a SNR of 27dB, making them suitable for most standard industrial, workshop, or domestic settings where hearing protection is required.

Red

UNDERSTANDING EN STANDARDS: THE GOLD STANDARD FOR EAR PROTECTION

For ear protection, the primary European benchmark is EN 352. This standard series is divided into several parts, each focusing on a specific type of device to ensure they effectively reduce noise exposure while maintaining safety.

The EN 352 Series Breakdown

EN 352-1 (Ear Muffs):

Covers traditional over-the-ear protectors. The standard tests for adjustable force, cushion pressure, and attenuation (how much noise is blocked). These are excellent for high-noise industrial environments.

EN 352-2 (Ear Plugs):

Covers both reusable and disposable inserts. Testing focuses on material comfort, attenuation, and the ability to maintain a seal within the ear canal.

EN 352-3 (Safety Helmet-Mounted Muffs):

Specifically for earmuffs that attach to hard hats. This standard is critical because the mounting mechanism can impact the seal and the wearer's balance.

EN 352-4 (Level-Dependent Earmuffs):

These use electronics to allow low-level sounds (like speech or alarms) to pass through while instantaneously blocking high-decibel impulse noises.

EN 352-5 (Active Noise Reduction):

Covers earmuffs that use "anti-noise" technology to cancel out low-frequency background hums, commonly found in heavy machinery operation.

EN 352-6 (Communication Headsets):

Sets the requirements for protectors that include integrated audio input (e.g., for radio communication), ensuring the safety of the signal doesn't exceed harmful levels.

Understanding Attenuation (SNR)

When buying ear protection, you will see an SNR (Single Number Rating) on the packaging. This is a simple value in decibels (dB) that tells you how much noise the device blocks on average.

Calculation:

If you are working in a 100 dB environment and wear protection with an SNR of 30 dB, the noise level reaching your ears is theoretically reduced to 70 dB.

The "Over-Protection" Trap:

You should aim for a noise level at the ear between 70 dB and 80 dB. If you block too much noise, your workers may feel isolated or unable to hear warnings, leading them to remove the protection entirely.

UNDERSTANDING EN STANDARDS: THE GOLD STANDARD FOR EAR PROTECTION

Respiratory protection in Europe remains anchored in a well-established set of EN standards. While the eyewear sector has recently transitioned to the new EN ISO 16321 suite, respiratory protection currently continues to rely on the core EN 149 (for filtering facepieces) and associated standards for other devices.

Key European Standards

These standards are what you should look for on the product markings to ensure they are compliant:

EN 149: Filtering Half-Masks (Disposables)

This is the most common standard you'll encounter. It covers "disposable" respirators that cover the nose, mouth, and chin. These masks are tested for their ability to filter out particles like dust, mists, and fibers. The standard categorizes them into three classes—FFP1, FFP2, and FFP3—based on their filtration efficiency and the amount of "leakage" allowed around the edges of the mask.

EN 140: Half-Masks and Quarter-Masks

Unlike disposable masks, EN 140 covers the facepiece itself (the "rubber" or silicone part) that is designed to be reused. These masks do not have built-in filtration; instead, they feature inhalation valves and connectors for replaceable filters. This standard ensures the mask provides a secure, ergonomic seal and is made of materials that won't irritate the skin during long shifts.

EN 136: Full-Face Masks

This standard applies to heavy-duty masks that cover the entire face, including the eyes. EN 136 is divided into three classes: Class 1 (light duty), Class 2 (general duty), and Class 3 (heavy duty/high heat). Because these masks provide a much tighter seal than half-masks and offer integrated eye protection, they are tested for impact resistance and thermal stability in addition to respiratory sealing.

EN 143: Particle Filters

When you use a reusable mask (from EN 140 or EN 136), you need to attach a filter. EN 143 governs "P" filters, which only handle solid and liquid particles (dust and smoke). They are rated P1, P2, or P3. A P3 filter attached to a full-face mask offers the highest level of particle protection available in a non-powered system.

EN 14387: Gas and Combined Filters

If the hazard is a gas or vapor (like paint fumes or ammonia) rather than just dust, the filters must meet EN 14387. These filters use a color-coded system to identify what they protect against—for example, Brown (A) for organic vapors or Grey (B) for inorganic gases. "Combined" filters include a particle element, meaning they protect against both fumes and dust simultaneously.

| CODE | MEANING |
|---------|---|
| FFP | Filtering Face Piece (Disposable) |
| P1/2/3 | Particle Filter Rating (P3 is highest) |
| A/B/E/K | Gas Filter Types (Organic, Inorganic, Acid, Ammonia) |
| R | Reusable (Can be used for more than one shift) |
| NR | Non-Reusable (Single shift only) |
| D | Passed the "Dolomite" clogging test (Stays breathable longer) |

MAXI VIEW SAFETY SPECTACLES

Item Code: 13-100144

Frame Material: Vinyl Frame
 Lens: Polycarbonate Mono Lens
 Vision: 180 degree Lateral Vision
 Colour: Clear

ANSI CE EN ISO 166

The Maxi View Goggles are a type of heavy-duty safety eyewear designed for comprehensive protection and comfort in industrial environments. Featuring a clear polycarbonate monolens and an indirect ventilation system.

DIRECT VENT MONO GOGGLES

Item Code: 13-100145

Frame Material: Vinyl Frame - Direct Vents
 Lens: Polycarbonate Mono Lens
 Vision: 120 degree Lateral Vision
 Colour: Clear

ANSI CE EN ISO 166

Clear Mono Goggles (Direct Vent) are tight-fitting goggles designed with a direct micro-ventilation system. This system maximizes airflow to prevent fogging but does not seal against liquids or fine dust.

INDIRECT VENT MONO GOGGLES

Item Code: 13-1001451

Frame Material: Vinyl Frame Indirect Vents
 Lens: Polycarbonate Mono Lens
 Vision: 120 degree Lateral Vision
 Colour: Clear

ANSI CE EN ISO 166

The Ultimate Hybrid Protection. These safety goggles deliver hybrid eye protection, brilliantly combining the sleek profile and comfort of safety glasses with the superior sealing capability of goggle.

UNDERSTANDING EN STANDARDS: THE GOLD STANDARD FOR EAR PROTECTION

The regulatory landscape for safety eyewear has officially transitioned from the legacy EN 166 standard to the new EN ISO 16321 series.

Here is the current status and what you need to know for your procurement and safety compliance:

The Transition Status

New Standard: EN ISO 16321-1:2022 (and its amendments) became the sole valid standard for new certifications as of November 11, 2025.

Legacy Products: Products already certified under EN 166 before the November 2025 cutoff remain legal to sell and use until their specific certification expires. This means you will likely see a mix of both markings on the market for the next few years (up to late 2029).

Key Differences You Will See

The new ISO standard is designed to be more inclusive and rigorous. When reviewing product specs, note these major changes:

| FEATURE | SYMBOL | DESCRIPTION |
|---------|--------|--|
| Feature | 1 | Highest clarity; suitable for permanent, all-day wear. |
| | 2 | Suitable for intermittent wear. |
| | 3 | Suitable for occasional wear. |
| Feature | S | Increased robustness. |
| | F | Low-energy impact (45 m/s) – Standard for safety spectacles. |
| | B | Medium-energy impact (120 m/s) – Required for goggles. |
| Feature | A | High-energy impact (190 m/s) – Required for face shields. |
| | 3 | Liquid droplets/splashes. |
| | 4 | Large dust particles (>5 microns). |
| Feature | 5 | Gas and fine dust particles (<5 microns). |
| | 8 | Short-circuit electrical arc. |
| | 9 | Molten metal and hot solids. |
| Feature | K | Scratch resistance (surface damage by fine particles). |
| | N | Fog resistance. |
| | T | Protection against high-speed particles at extreme temperatures. |

New Standards:

You may begin to see EN ISO 16321 markings on newer products. This is the newer suite of standards that is gradually replacing the older EN 166, though EN 166 remains the widely recognized core reference.

Maintenance:

Remind your team that cleaning polycarbonate lenses with harsh solvents (like acetone) can degrade the material and compromise safety. Always store glasses in a case to prevent surface damage that could weaken the impact resistance.

ANSI stands for the American National Standards Institute.

When you see an "ANSI" rating on safety gear (like the Z87.1 eye protection standard), it is a stamp of credibility that tells your clients the product has been tested against rigorous, consensus-based benchmarks for safety and performance.

SAFETY HARD HAT WITH CAP LAMP BRACKET

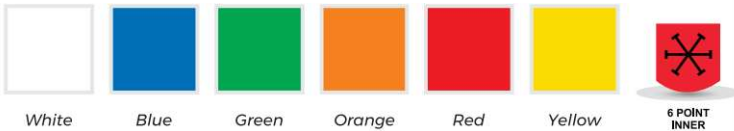

Item Code: 13-100409 | 13-100410 | 13-100411 | 13-100412 | 13-100413 | 13-100414
 Size: 3 - 12

Material: Polypropylene (PP)
 Inner: 6 Point Inner
 Main Feature: Lamp Bracket
 Colour: Available In 6 distinct colors

EN ISO
397

This robust safety helmet is constructed with an impact-resistant outer shell made from Polypropylene (PP), a lightweight yet extremely durable thermoplastic material known for excellent chemical resistance and structural integrity.

TUFF NIKKI STYLE HARD HAT

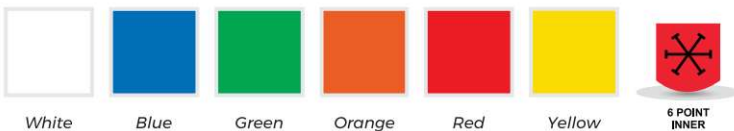

Item Code: 13-100414A1 | 13-100414A2 | 13-100414A3 | 13-100414A4 | 13-100414A5 | 13-100414A6
 Size: 3 - 12

Material: Acrylonitrile Butadiene Styrene (ABS)
 Inner: 6 Point Ratchet
 Colour: Available In 6 distinct colors

EN ISO
397

The Tuff Nikki Hard Hat is a reliable industrial safety helmet featuring a durable outer shell made from ABS. ABS is a tough, lightweight thermoplastic material known for its superior impact strength and rigid structure, offering excellent protection against falling objects and sharp impacts.

CHIN STRAP

Item Code: 13-100390
 Size: 3 - 12

Material: Elasticized Webbing

The Pinnacle 2-point elastic chin strap is designed as an accessory for a safety helmet or hard hat. The strap is constructed from a blue, white, and black striped elasticized webbing, providing a comfortable and adjustable fit for the user.

Blue & White

BUMPER CAP

Item Code: 13-100169 | 13-1001691
Size: One Size Fits Most

Material: 50% Cotton & 50% PE
Inner: ABS Shell & EVA Padding
Color: Available in 2 distinct colors.

This headwear is an innovative safety solution known as a Bump Cap, designed to provide protection against minor impacts, scrapes, and lacerations, primarily in areas where a full hard hat is overly cumbersome but minor head hazards exist.

Vital test compliance:
- Shock Absorption
- Resistance to penetration

A fall arrest system is a reactive safety measure designed to stop a worker mid-fall, preventing contact with lower levels. It utilizes a full-body harness and shock-absorbing connectors to distribute impact forces safely, keeping the user securely suspended until rescued.

Red & Black

SCAFFOLDING HOOK

Item Code: 13-100424

Material: High Tensile Steel
Opening: +/- 50mm
Breaking Load: Min 25kN
Finish: Zinc Plated
Colour: Silver

Scaffolding hook (or scaffold hook connector) is a specialized, large-gate safety connector designed primarily for fall protection, allowing workers to securely anchor themselves to scaffolding tubes, horizontal lifelines, or structural members.

Silver

SINGLE LANYARD WITH SHOCK ABSORBER & SNAP HOOK

Item Code: 13-1004242

Material: 45mm High-Strength Polyester Webbing
Hook: Single Snap Hook
Lanyard: Single Lanyards
Used With: Full Body Harness
Colour: Yellow & Lime

A single lanyard with a shock absorber and snap hook is a critical fall arrest component used to connect a safety harness to an anchorage point. It protects workers at heights by reducing impact forces by up to 50% during a fall.

Yellow & Lime

DOUBLE LANYARD WITH SHOCK ABSORBER & SNAP HOOK

Item Code: 13-1004242A

Material: 45mm High-Strength Polyester Webbing
Hook: Double Snap Hooks
Lanyard: Double Lanyards
Used With: Full Body Harness
Colour: Yellow & Lime

A double lanyard with a shock absorber and snap hook is a critical fall arrest component used to connect a safety harness to an anchorage point. It protects workers at heights by reducing impact forces by up to 50% during a fall.

Yellow & Lime

DOUBLE LANYARD WITH SHOCK ABSORBER & SCAFFOLDING HOOK

Item Code: 13-1004243

Material: 45mm High-Strength Polyester Webbing

TOOL LANYARD

Item Code: 13-1004245

Material: Nylon
Length: +- 0.9m & Stretches to +- 1.3m
Ends: Elasticated Adjustable Cord & Carabiner Hook
Colour: Lime

A tool fall protection lanyard is a tethering device used to securely attach tools to a worker's harness, belt, or a nearby anchor point while working at heights. Its primary purpose is to prevent tools from falling, reducing the risk of injuries, fatalities, and damage from dropped objects.

Lime

RATCHET STRAP

Item Code: 13-1004233
Size: 9m

Material: 50mm Polyester Webbing
Colour: Orange

9m orange ratchet strap is a heavy-duty tie-down designed to secure cargo during transport. Its durable polyester webbing and high-tension mechanism ensure loads remain stable on trucks or trailers, preventing shifting and ensuring the safe transit of heavy equipment.

Orange

MINERS CAP LAMP BELT

Item Code: 13-100416 | 13-100417 | 13-100418
Size: S | M | L

Material: 50mm Polyester Webbing
Buckle: Double-sided adjustable, high-impact quick-release Galvanized steel.
Load Capacity: Designed for weights up to 10kg.
Colour: Black

Specifically designed to carry cap-lamp batteries, rescue packs, and pouches, this belt features unique dual-adjustable buckles. This setup ensures perfectly balanced equipment distribution and a comfortable, customized fit, giving you the stability needed to tackle demanding work with ease.

Black

KIDNEY BELT

Item Code: 13-100481 | 13-100486-1 | 13-100482 | 13-100483 | 13-100484
Size: S - 2XL

Material: Elasticized Polyester with Reinforced Synthetic Leather Panel
Height: 200mm
Closure: Heavy-duty Velcro fastening system.
Colour: Black

This ergonomic support belt is engineered to safeguard the lower torso and internal organs from strain or shock during demanding tasks. Its wide elasticated band provides stabilizing compression, reducing muscle fatigue while encouraging proper posture in high-impact industrial environments.

Black

KNEE PADS

Item Code: 13-100485
Size: One Size

Material: 0,5" EVA Foam Padding
Cap: Anti-Slip Rubber Cap
Fixture: Adjustable Elastic Bands with Buckle For Easy Release
Colour: Black

These tactical knee pads feature half-inch dense foam padding and a durable, anti-slip cap for superior protection. They utilize reliable, adjustable elastic straps with easy-to-use plastic buckles, providing a secure.

Black

ORANGE KNEE GUARDS

The Professional's Choice for Heavy-Duty Impact Protection.

In the industrial environment, your mobility is your livelihood. Engineered for professionals who spend their shifts on hard surfaces—from construction sites to mining operations—these Orange Knee Guards combine high-visibility safety with medical-grade joint protection.

- High Density EVA Outer Shell & Medium Density EVA Inner
- Non-Slip Thread Pattern

FIRST AID KITS

In the high-stakes environment of a job site, Regulation 3 and Regulation 7 of the South African Occupational Health and Safety Act, act as the blueprints for survival. Regulation 3 mandates that employers provide accessible first aid equipment and trained responders, while Regulation 7 dictates the specific, high-quality contents required to treat workplace injuries.

Housed in a durable metal box to withstand dust, impact, and heat, these kits are more than just a legal checkbox. Their intended use is to provide immediate stabilization for injuries—from minor lacerations to more severe trauma—preventing complications before professional medical help arrives. By adhering to these regulations, a site ensures it isn't just "compliant," but actively prepared to turn a potential disaster into a manageable incident.

FIRE BLANKET

Item Code: 13-100850 | 13-100851 | 13-100852 | 8-100225

Size: 2x2m | 2x3m | 3x3m | 1x50m

Material: 100% Glass Fiber

Grommets: Available on pre-made size

Colour: White

With the ability to endure temperatures up to 550°C, these blankets are a testament to quality and durability. Whether you're in the construction sector, managing a warehouse, or deep in the mining industry, these blankets are tailored to smother small fires and shield against the hazardous splatter of welding works.

BARRIER NETTING WOVEN

Item Code: 13-100510
Size: 1x50m

Material: Woven Polyester
Colour: Orange & Yellow

Clearly cordoning off open trenches, excavations, or dangerous machinery zones to prevent unauthorized access. Providing a lightweight but sturdy boundary for events or public works.

BARRIER FENCE

Item Code: 13-100511
Size: 1x50m

Material: HDPE
Colour: Orange

Orange Barrier Fence is the industry standard for high-visibility site safety. Unlike the woven variety, this extruded plastic mesh is recognized by its distinct oval apertures, offering a rigid yet flexible boundary that is nearly impossible to ignore.

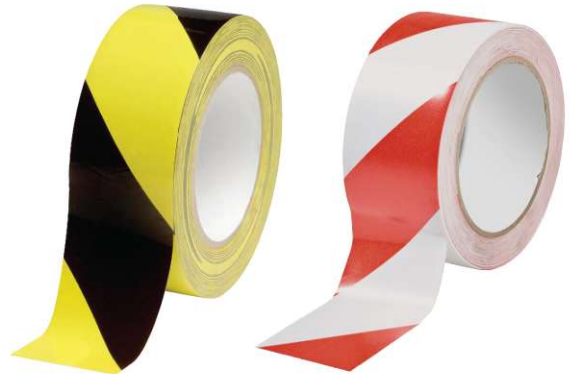

BARRIER TAPE

Item Code: 13-1005123 | 13-100514 | 13-100515 | 13-1005152
Size: 75mm x 500m | 75mm x 100m | 75 x 300m | 75 x 500m

Material: LDPE (50mic)
Colour: Black & Yellow (75mm x 500m) | Red & White

Barrier tape—that ubiquitous "Danger" or "Caution" ribbon found on every construction site—is primarily engineered for high visibility and disposable durability. While it looks like simple plastic, the material choice determines how well it stands up to the African sun and wind.

REFLECTIVE TRUCK TAPE

Item Code: 13-100513A | 13-100513B | 13-100513C | 13-100513D
Size: 50mm x 50m

Material: Reflective Stick on Tape
Colour: Red | Yellow | Silver | Lime

Reflective Truck Tape (also known as conspicuity tape) is more than just a visibility aid—it is a legal requirement for heavy vehicles and trailers under SANS 20104.

RED FLAG

Item Code: 13-1005150 | 13-1005151

Material: Wooden Handle With Polycotton
Reflective: 14mm Cross (13-1005150)
Colour: Red

A Red Construction Flag (often referred to as a "Warning Flag" or "Traffic Flag") is a fundamental safety tool used for manual traffic control and hazard signaling.

REVOLVING WARNING LIGHT 12V

Item Code: 13-1005153

- Features:** Revolving Amber Light (Glass Bulb)
 12VDC Input Voltage
 Lighter Plug Fitting into Vehicle

TRAFFIC CONES

Traffic cones are the "first responders" of site safety. In industrial and construction environments, they serve as versatile, high-visibility tools for immediate risk mitigation. Beyond simple delineation, these devices function as a dynamic communication system, providing clear visual directives that bridge the gap between complex site plans and real-time worker behavior.

Traffic Cone With Black Rubber Stand

HAND CLEANER WITH GRIT

Pinnacle Hand Cleaner with Grit is a powerful, water-based gel specifically formulated for industrial and workshop environments. It is designed to lift stubborn contaminants like grease, oil, grime, and dirt while remaining gentle on the skin.

500g Tub: 13-100520

5kg Bucket: 13-100521

20kg Bucket: 13-100522

DEGREASER PINK

The Pinnacle Pink Degreaser is a high-performance, heavy-duty cleaning solution engineered to cut through the toughest industrial grime, oils, and grease build-up. Its distinct pink formulation acts as a versatile workhorse for workshop floors, machinery, and automotive components.

1L Bottle: 13-100530

5L Bottle: 13-100531

20L Bottle: 13-100532

A-GRADE CLEANING RAGS

Item Code: 13-100500

The A-Grade Cleaning Rag (5kg pack) is a staple in any industrial or workshop environment. When positioning this as part of your "Pinnacle" or industrial supply range, the value lies in the consistency, absorbency, and reliability of the material.

Size: 5kg

WHITE POLO RAGS

Item Code: 13-100501

The White Polo Rags are highly sought after in industrial and professional settings because they are specifically sorted for uniformity, softness, and high absorbency. Unlike mixed colored rags, white rags are preferred in environments where bleeding dyes must be avoided or where a sterile appearance is required.

Size: 5kg

MUTTON CLOTH 400G

Item Code: 13-100502

The Mutton Cloth 400g is a versatile essential for industrial cleaning, polishing, and preparation tasks. Because it is highly absorbent and soft, it is widely favored for applications where precision, surface protection, and fine cleaning are required.

Size: 400g Roll

FOLDING WET FLOOR SIGN

Item Code: 13-1005154

The Folding Yellow Wet Floor Sign is a critical safety item in your PPE and industrial supply catalog. Because your brand focuses on industrial safety standards and reliability, this product should be positioned as an essential risk-mitigation tool rather than just a simple piece of plastic.

Yellow

SQUARE WET FLOOR CONE

Item Code: 13-1005154A

The Square Wet Floor Cone (68cm) is a premium, high-stability alternative to the traditional A-frame sign. Standing at 68cm, it offers superior height and visibility, making it the ideal choice for high-traffic environments like warehouses, large factory floors, and busy retail or public spaces where a taller profile is needed to catch the eye from a distance.

Height: 680mm

Yellow

MOP

Item Code: 13-1005158

The 400g Industrial Mop is the heavy-duty workhorse of your facility maintenance range. In an industrial or commercial setting, the "400g" weight is the sweet spot—providing enough mass to hold significant cleaning solution for larger surface areas while remaining manageable for staff to use throughout a shift.

Weight: 400g

PLATFORM BROOM

The Platform Broom (often referred to as an "Industrial Sweeping Broom") is a critical, heavy-duty tool designed for aggressive debris removal in workshops, construction sites, and manufacturing floors. Given the range of cleaning products you manage, this is the final piece of the "Dry-to-Wet" cleaning workflow.

We've replaced boxy, traditional cuts with an ergonomic, contoured fit that honors the female form in motion.

TAILORED FOR MOTION.

LADIES OUTDOOR SHIRTS

This is the shirt that feels like home in the wild.

The horizon doesn't have an office hour, and neither does the man who seeks it. Whether you're navigating the dense bushveld, scouting a new trail, or setting up camp as the sun dips below the ridge, your shirt shouldn't just be "clothing" — it should be a piece of equipment. The Pinnacle Men's Outdoor Shirt is engineered for the modern frontiersman who demands total utility without sacrificing a classic, rugged aesthetic.

THE GREAT EXPLORER.

MENS OUTDOOR SHIRTS

Nature doesn't take it easy on you, and your gear shouldn't either. Whether you're navigating the early morning dew of the bushveld or trekking toward a high-altitude lookout, you need a garment that understands the balance between rugged defense and effortless movement. The Pinnacle Ladies Outdoor Shirt is engineered for the woman who demands a technical edge without compromising on a refined, functional fit.

- Size 30 - 52

Made to provide a literal shield between you and your environment you work in everyday.

THE FABRIC OF LABOR

OUTDOOR TROUSERS

Denim was born in the mines and raised on the ranch, but the Work Jeans was perfected on the industrial frontline. A good pair of jeans is a staple, but a great pair of work jeans is a tool. It's the piece of gear you don't have to think about because it's busy surviving the friction, the sparks, and the grit of a twelve-hour shift.

THE WORK JEANS.

THE MOBILE COMMAND CENTER.

The trail doesn't care about your plans. It only cares about your preparation. When the terrain shifts from flat hardpack to steep, rocky inclines, the last thing you should be thinking about is your gear. You need a layer that acts as a silent partner—tough enough to brush off thorns, flexible enough to clear a ledge, and light enough to keep you moving until sundown.

The Technical Trousers is engineered for those who demand more than just "workwear." It's a precision instrument for the lower body.

CARGO PANTS

THE PRECISION OF MOTION.

Your day doesn't happen behind a desk; it happens on the move, between sites, and under the hood. You need more than just fabric—you need a garment that functions like a tool belt but wears like a second skin. Our Cargo Pants are engineered for the person whose pockets are always full and whose schedule is always demanding.

From the first cup of coffee to the final check of the day, these are the pants that keep up with the pace.

TECHNICAL TROUSERS

TACTICAL VERSATILITY.

Storage on a technical trousers must be intentional, not just accidental.

THE HIDDEN LOOK

CAMO SOFTSHELL

This jacket is for the person who needs to disappear into their surroundings without sacrificing an ounce of technical performance.

There's a unique confidence that comes with blending in. Whether you're tracking through the early morning brush or monitoring a site where you need to keep a low profile, the Camo Softshell jacket is designed for the invisible professional. It's not just about the pattern; it's about the silence and the stillness that the right gear provides.

THE GHOST IN THE FIELD.

Colours | Black Navy

- Zip Chest Pocket

- 100% 280gsm Polyester

Crafted from 100% Polyester, the "multitool" of your outdoor wardrobe.

THE PROFESSIONAL LOOK.

Designed for those who keep moving when the clouds roll in, this jacket is the bridge between lightweight comfort and heavy-duty protection.

The weather doesn't always play by the rules. One minute it's a biting wind on the ridge, the next it's a light drizzle in the valley. You need a layer that's as adaptable as your itinerary. Enter the Pinnacle Softshell—the "multitool" of your outdoor wardrobe.

THE ALL-SEASON GUARDIAN.

SOFTSHELL JACKETS

PUFFER JACKETS

THE FORTRESS OF WARMTH.

When the mercury drops and the wind starts to bite, the world doesn't stop moving—and neither should you. Whether you're standing on a cold warehouse floor or navigating a high-altitude trail as the sun dips, you need more than just a coat. You need a sanctuary. The Pinnacle Puffer Jacket is engineered to be your personal climate-controlled fortress.

This is high-performance insulation designed for the person who demands industrial-strength warmth without the weight.

PUFFER BODY WARMER

THERMAL EFFICIENCY, TOTAL LIBERTY.

We've focused the insulation where it matters most. By protecting your core, the Body warmer allows your body to regulate its temperature without the restrictive bulk of full sleeves.

- 100% Nylon & 100% Polyester
- Sleeveless
- 2 Side Pockets with Zips

THE CORE OF THE MISSION.

There is a specific window in the morning when a jacket is too much, but the wind is too sharp to ignore. It's that moment when you need your core protected but your arms free to handle the tools, the wheel, or the climb. The Puffer Body warmer is the ultimate compromise—engineered for high-output activity in low-temperature environments. This is the essential middle layer for the professional who never stays still.

CRUISER VELLIE

Colours | Chocolate Brown Upper with Gum Sole | Tan Upper with Crepe sole

INDEX

Our apparel is constructed exclusively from carefully selected fabrics known for their toughness and resilience, while our leather footwear provides the superior traction and elemental protection needed for demanding trails. This holistic approach ensures that each piece withstands the rigors of outdoor adventures while maintaining a comfortable fit. Quality is our priority throughout production, so our garments and footwear don't just look good they perform under pressure.

Drawing inspiration from the Gorilla's combination of brute strength and keen intelligence, we understand the equilibrium of power and compassion essential for success. Our name is derived from Guerrilla warfare, which highlights the importance of agility, unexpected tactics, and a deep understanding of the environment.

For outdoor enthusiasts, comfort and reliability from head to toe are paramount. Whether trekking through rugged terrain or exploring the wilderness, the right gear can make all the difference. Our collection of garments and leather footwear is thoughtfully crafted to meet these demands, blending robust materials for maximum durability and style.
